PROJECTS

- **PassDefender:**

Github link: <https://github.com/Tun-Dev/PassDefender>

Hosted link: <https://passdefenderr.000webhostapp.com/index.html>

- Created with HTML, CSS, PHP and PhpMyAdmin as database.
- Passdefender is a web app that's used to store secret notes or passwords, a basic CRUD(Create, Read, Edit and Delete) app.
- Security questions are used instead of passwords, whereby 2 questions are asked at random for each time a user logs in. These questions are to be answered during sign up.

- **Github Userpage Clone:**

Github link: <https://github.com/Tun-Dev/BuyCoinsApplication>

Hosted link: <https://githubusercheck.netlify.app/>

- Created with HTML, CSS, Javascript, Github GraphQL API.
- This is a github user page clone that searches for a valid github user and displays 20 repository with all user infos.
